(54) Title: **WATER PURIFICATION APPARATUS**

(57) **Abstract:** A water purification apparatus having an inlet and an outlet, and at least one water purification means thereinbetween, wherein the outlet includes at least a first and second water release means, the first release means being operable at a first flow rate, and the second release means being operable at a second flow rate, is described. Preferably, at least one water release means is operable at a relatively slow flow rate of generally up to 0.1 litre per minute, and at least one other water release means is operable at a relatively fast flow rate of, for example, up to 2 litres per minute. The present water purification apparatus provides the operator with the ability to very accurately obtain an exact volume of water desired.
